

Immunotherapy Allergy Drops

Immunotherapy is widely used by allergy specialists because it treats the underlying cause of allergic reactions instead of temporarily alleviating symptoms. Immunotherapy is designed to gradually desensitize the immune system to specific allergens. Patients receive small doses of a specific allergen(s) – not enough to cause a full-blown allergic reaction, but enough to build up a tolerance. Immunotherapy can potentially lead to remission of allergy symptoms, even after discontinuing treatment.

Sublingual vs. Subcutaneous Immunotherapy

There are two ways to administer immunotherapy: subcutaneously (via allergy shots) and sublingually (via drops applied underneath the tongue). Sublingual immunotherapy (SLIT) is advantageous for a number of reasons:

Shots are unpopular. Children and parents do not like shots, even for immunizations, and appreciate an alternative.

Drops are more convenient to administer. Sublingual immunotherapy can be administered at home, saving patients from having to frequently schedule doctors' appointments and miss school or work.

Drops do not require a physician to administer them. Since sublingual immunotherapy can be administered at home, patients save money on regular appointment co-pays and other charges (travel time & time taken off work) that can add up over the course of treatment.

Drops are well-tolerated with very few side effects. SLIT, which has been the standard of care in Europe for decades, has a stellar safety record.

seroSLIT

seroSLIT is one of the leading sublingual immunotherapy services. With simple, streamlined service, seroSLIT enables medical practices to treat a wide range of allergy patients. seroSLIT's web platform has built-in tools and an intuitive design to help physicians prescribe safe and effective doses of SLIT (prescriptions), custom-mixed for (each) patients' needs.

If you are a physician and would like to learn more about setting up an account, please contact seroSLIT today. You will be pleasantly surprised by how quick and easy it is to get started.

Subcutaneous Allergen Vaccines Prescription Services

Customized Prescriptions

Formulated according to physician's instructions and specifications.

Delivery Times

Treatment sets delivered in 10 business days or less.

Allergen Extracts

Complete antigen menu from Hollister-Stier, Greer, and ALK.

By working with multiple suppliers, delays in preparing treatment sets due to antigen shortages are avoided.

Electronic Ordering

Simple web-based ordering platform saves time and eliminates errors that can occur with filling out and faxing paper forms.

Automated notification system for Rx refills ensures timely ordering and delivery of treatment sets.

Cross-reactivity & Biocompatibility Algorithms ensures treatment sets are mixed appropriately.

Allergy Treatment with seroSLIT

The Turn-Key SLIT Allergy Practice allows physicians to treat mild, moderate, and severe allergy patients with sublingual immunotherapy without having to make the significant investments involved with purchasing and stocking allergen extracts, training staff, and dedicated office space.

Sublingual Allergy Drops

seroSLIT has been favorably received by the many medical practitioners who have integrated the service into their practice, and have already started treating patients with sublingual allergy drops. Physicians say they are now able to meet the needs of a greater pool of allergy patients, support staff find that the service easily fits into the practice's existing infrastructure, and patients enjoy a customized treatment that produces long-lasting results.
